

XENON Defence Quad Chart

IT INFRASTRUCTURE SOLUTIONS

Design, delivery and support of High Performance Computing systems for advanced Defence Capabilities used in:

- Artificial Intelligence
- Simulations and training
- Visualisation and aggregating multiple data streams in real-time

Delivery of best of breed components across compute, storage, networking for use in the field, command centre, and headquarters.

Manufacture and assembly of systems in Melbourne.

CAPABILITIES

Designing IT solutions for Defence Projects based on when they are commissioned and go live, not when the tenders are written and awarded.

This involves building IT solutions based on future, not-yet-released technology using a functional approach and with a **fixed and firm pricing structure**. Ensures that all XENON projects are delivered with the latest, current technology providing longer lifespan and lower TCO.

XENON is the Australian experts in IT systems required for AI, simulations and training, visualisation:

- High Performance Computing systems
- Compute nodes and servers for specific requirements
- Data storage – ruggedised, field deployable, high performance and large scale
- Networking

All solutions assembled and supported from Melbourne.

Long term, proven, preferred supplier relationships with specialist component OEMs such as Mercury, NVIDIA, Intel, AMD, Weka, VAST Data and more that allow us to create bespoke solutions to your computing challenges.

KEY CUSTOMERS

Supplier to Defence and Defence Primes on major projects since 2005.

BAE SYSTEMS

THALES

SINCE 1996

Australian private company, founded in 1996.

Over 30 employees; manufacturing and assembly HQ in Melbourne; representatives in Brisbane and Sydney.

ISO 9001:2015 Certified.
DISP Certification in process.
